## Boats and Streams Questions and Answers for Bank Exams Pdf

1. A man can row upstream at 7 kmph and downstream at 10 kmph . Find man's rate in still water and the rate of current.
a. $\quad 1.5 \mathrm{~km} / \mathrm{hr}$
b. $\quad 1.8 \mathrm{~km} / \mathrm{hr}$
c. $\quad 2.1 \mathrm{~km} / \mathrm{hr}$
d. $2.7 \mathrm{~km} / \mathrm{hr}$

Ans: A

$$
\begin{aligned}
& \text { Rate in still water }=\frac{1}{2}(10+7) \mathrm{km} / \mathrm{hr}=8.5 \mathrm{~km} / \mathrm{hr} \\
& \text { Rate of current }-\frac{1}{9}(10-7) \mathrm{km} / \mathrm{hr}=1.5 \mathrm{~km} / \mathrm{hr} \text {. }
\end{aligned}
$$

2. There is a road beside a river. Two friends started from a place $A$, moved to a temple situated at another place $B$ and then returned to $A$ again. One of them moves on a cycle at a speed of $12 \mathrm{~km} / \mathrm{hr}$, while the other sails on a boat at a speed of $10 \mathrm{~km} / \mathrm{hr}$. If the river flows at the speed of $4 \mathrm{~km} / \mathrm{hr}$, which of the two friends will return to place A first?

Clearly, the cyelist moves both ways at a speed of $12 \mathrm{~km} / \mathrm{hr}$ So, average speed of the cyclist $=12 \mathrm{~km} / \mathrm{hr}$,
The boat sailor moves downstream $(10+4)$ i.c., $14 \mathrm{~km} / \mathrm{hr}$ and upstream (10 - 4) i.e, $6 \mathrm{~km} / \mathrm{hr}$
So, average speed of the boat sailor $=\left(\frac{2 \times 14 \times 6}{14+6}\right) \mathrm{km} / \mathrm{hr}$

$$
=\frac{42}{5} \mathrm{~km} / \mathrm{hr}-8.4 \mathrm{~km} / \mathrm{hr}
$$

Since the average speed of the cyclist is greater, he will return to A first.
3. The speed of a boat when travelling downstream is $32 \mathrm{~km} / \mathrm{hr}$, whereas when travelling upstream it is $28 \mathrm{~km} / \mathrm{hr}$, what is the speed of the boat in still water and at the speed of the stream?
a. $2 \mathrm{~km} / \mathrm{hr}$
b. $3 \mathrm{~km} / \mathrm{hr}$
c. $4 \mathrm{~km} / \mathrm{hr}$
d. $5 \mathrm{~km} / \mathrm{hr}$

Ans: A
. Speed of boat in still water $=\frac{1}{2}(32+28) \mathrm{km} / \mathrm{hr}=30 \mathrm{~km} / \mathrm{hr}$.
Speed of stream $=\frac{1}{2}(32-28) \mathrm{km} / \mathrm{hr}=2 \mathrm{~km} / \mathrm{hr}$.
4. A Boat goes 8 km in one hour along the stream and 2 km in one hour against the stream. The speed in km/hr of the stream is
a. 2
b. 3
c. 4
d. 5

Ans: B
Speed of the stream $=\frac{1}{2}(8-2) \mathrm{km} / \mathrm{hr}=3 \mathrm{~km} / \mathrm{hr}$.
5. A boatman rows 1 km in 5 minutes, along the stream and 6 km in 1 hour against the stream. The speed of the stream is
a. 3 kmph
b. 6 kmph
c. 10 kmph
d. 12 kmph

Ans: A
Rate downstream $=\left(\frac{1}{5} \times 60\right) \mathrm{kmph}=12 \mathrm{kmph}$;
Rate upstream $=6 \mathrm{kmph}$.
Speed of the stream $=\frac{1}{2}(12-6) \mathrm{kmph}=3 \mathrm{kmph}$.
