A category is a keyword or phrase end users can assign to documents when they send them to users, groups, or BROADCAST AGENT.

What are the roles of BO designer or Architect?

An Architect is responsible for designing the OLAP interface by fulfilling the requirements.

Once the Interface has designed it should be regressively tested before giving to the end user population.

What are the types of connections or types of universe?

Designer provides three types of connections: secured, shared, and personal.

Personal: Universe can be accessed by a single user or A single user can query the data from database

Sharing : multiple user can send queries to database.

Secure : This is the default connection type. A universe can be accessed by multiple users and can send multiple queries to the database.

What is a hierarchy?

A hierarchy is an ordered series of related dimensions grouped together to perform multidimensional hierarchy.

The relationship between object in the hierarchy is one – to – many.

What are the types of hierarchy?

There are two types of hierarchies.

Default hierarchy : It contains the dimension objects in the order in which they are presented in the class.

Custom hierarchy : A custom hierarchy is created from default hierarchy

How to create hierarchies in BO?

A hierarchy, which the designer sets up when creating the universe, consists of dimension objects ranked from "less detailed" to "more detailed".

The objects that belong to hierarchies are the ones you can use to define scope of analysis.

What is a Filter?

A filter enables you to hide the data you do not want to view behind the scenes and display only the data you need.

What are the types of Filters?

In the crystal reports the data can be filtered in two different ways.

Select Expert : It allows you to define the simple conditions.

Selection Formula : The data can be filtered by defining the expressions in formula editor.

What is a Prompt?

A Prompt is an end users object, which allows the users to enter the value or select the values to restrict the data in the report.
